TPTS · MiPay SME Digital Ecosystem

UAT Compliance Evidence Report

Where each UAT requirement of the Business Case v3.0 is implemented, and how far it complies — measured by test-case coverage of each UAT module

9 / 13
BC acceptance tests fully met
BC p.18 · 4 partially met

94.4%
Average BC compliance
mean of the 13 acceptance tests

92.4%
Test cases passing
122/132 required · 137 tests run (4 failed, 3 skipped)

Source business case	TPTS Mindlabs SME Digital Ecosystem Business Case, v3.0 (3 Nov 2026) — UAT scope pp. 17–18
Related inputs	MiPay SME UAT Storyboard (SB); docs/UAT-BACKEND-TEST-PACK.md (TC-ID definitions)
System under test	MiPay SME platform — Spring Boot backend + Angular frontend (/home/arun/sme)
Evidence run	2026-11-09T02:03:28+05:30 · ./gradlew test (H2 PostgreSQL mode, UTC, sandbox seed)
Status	Evidence document — for joint steering committee review

1. Executive summary — Business Case UAT compliance

Measured against the Business Case v3.0 UAT section (pp. 17–18), **9 of the 13 acceptance tests are fully compliant** and 4 are partially compliant. Average compliance across the 13 is **94.4%**. Each acceptance test is scored by the share of its evidencing test cases that pass. All five demonstration steps on BC p.17 can be run end to end. **The UAT exit bar is not yet met**: the business case requires every money and security test to pass, and 5 money/security test case(s) do not. Apart from the QR pending display, every remaining gap is a concurrency defect. The flows behave correctly when actions happen one at a time, but some fail when the same money is touched at the same moment. Those results also vary between runs (section 7.2).

1.1 The 13 acceptance tests (BC p.18)

Each BC p.18 acceptance test is mapped to the TC-IDs that evidence it. Compliance = evidencing TC-IDs passing ÷ evidencing TC-IDs.

BC acceptance test	Minimum evidence (BC p.18)	Evidencing test cases	Compliance
Merchant and supplier approval	Unapproved parties blocked; verified receiving account changes require independent approval.	TC-ONB-01, TC-ONB-02, TC-ONB-03, TC-ONB-04, TC-OPS-26, TC-SET-16	**100%**
Acceptance and availability	Payment confirmed once; pending card proceeds never increase spendable funds prematurely.	TC-ACC-01, TC-ACC-02, TC-ACC-03, TC-BAL-01 (partial), TC-BAL-02	**80%**
Pay from balance	MSME authorises invoice in TPTS; atomic debit, supplier credit and invoice match use one transaction reference.	TC-B2B-01, TC-B2B-02, Scene 3, TC-RACE-07	**100%**
Insufficient balance	Purchase refused or separately approved/funded advance offered; no hidden overdraft.	TC-B2B-05, TC-B2B-06, Scene 5, TC-RACE-04	**100%**
Concurrent orders	Two purchases cannot both spend the same available amount. Holds and their release reconcile.	TC-B2B-08, TC-BAL-03, TC-ACC-06, TC-RACE-02 (fail), TC-RACE-12	**80%**
Timeout and duplicate	Pending preserved; no duplicate debit, supplier credit or stock adjustment after retries.	TC-ACC-04, TC-ACC-05, TC-B2B-03, TC-B2B-04, TC-B2B-07, TC-RACE-01, Scene 2, Scene 4	**100%**
Advance eligibility	Loan proceeds, own transfers and circular B2B activity excluded from verified sales.	TC-REC-05, TC-ADV-06, TC-SET-27	**100%**
Advance funding	Approval alone adds no funds; actual lender transfer and issuer confirmation required.	TC-ADV-01, TC-ADV-02, TC-RACE-03, TC-RACE-08, TC-RACE-09 (fail)	**80%**
Repayment mandate	Only eligible receipts and remaining debt used; refund, zero-sales and maturity cases handled correctly.	TC-ADV-03, TC-ADV-04, TC-ADV-05, TC-SET-25, TC-RACE-05	**100%**
Consent and Khata	Data shared only for agreed purpose; customer-level Khata lending feed excluded by default.	TC-REC-02, TC-REC-03, TC-REC-04, TC-SET-07, TC-OPS-29, TC-OPS-30	**100%**
Reconciliation	Issuer assets/liabilities, merchant subledger, B2B transfer and credit ledger match with no unexplained differences.	TC-RCN-01, TC-RCN-02, TC-BAL-05, TC-SET-23, TC-OPS-13, TC-RACE-06, TC-RACE-11 (fail), Scene 7	**88%**
Fees and billing	Apply the agreed tariff once; reconcile operator, interchange and sponsor charges; no unauthorised merchant debit.	TC-RCN-03, TC-SET-10, TC-SET-11, TC-SET-12, TC-SET-13, TC-SET-14, TC-SET-15, TC-OPS-14 Note: the seeded card fee is 1.50%, but BC p.16 specifies 2.50%. The tests check the seeded value (see 7.3).	**100%**
Security and recovery	Cross-merchant access prevented; privileged actions logged; restore and ledger recovery tested.	TC-SEC-01, TC-SEC-02, TC-SEC-03, TC-SEC-04, TC-SEC-06, TC-OPS-21, TC-OPS-22, TC-OPS-24	**100%**

1.2 UAT exit criteria (BC p.18)

Criterion	Evidence	Result
All financial and security-critical tests pass; no unexplained balance difference	45/50 critical TC-IDs pass; recon TC-RCN-01/02 = PASS/PASS	NOT MET
At least 95% of remaining agreed cases pass	77/82 = 93.9%	NOT MET
Peak test: 20 TPS for 30 minutes within sandbox limits	Default pack runs 20 TPS for 30 s only; full 30-minute run (-Duat.long=true) not yet evidenced	PARTIAL
Service targets: 99.9% availability, 15-min critical ack, RTO 2 h, RPO = 0	TC-PERF-02 PASS, TC-PERF-03 PASS, TC-SEC-03 PASS	MET

2. Live UAT sign-off: click, check, decide

Each UAT item below links to the live page on the sandbox (**http://localhost:4200**). Open the link, follow the step, compare what you see with 'Pass if', and tick **Pass** or **Fail**. The boxes and notes fields can be filled in any PDF reader. Save the file to keep the verdicts. The automated result from the evidence run is shown next to each item for comparison. Each item also has a **recorded video** of the same steps on the live sandbox. Click the thumbnail to play it, or open the **evidence player** (uat-evidence/index.html), which shows every video next to its live link and screenshots.

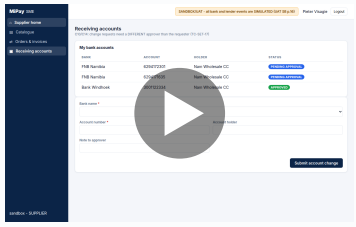

Before you start

Role	Phone	Password / OTP	Login tab
Merchant (Ndapewa's shop)	`0811111111`	`OTP 123456 (sandbox shows it on screen)`	Merchant OTP login (default tab)
Supplier (Kamati Wholesale)	`0852222222`	`supplier123`	Staff login
Lender	`0813333333`	`lender123`	Staff login
TPTS Operations	`0827777777`	`ops123`	Staff login
Mindlabs Admin	`0819999999`	`admin123`	Staff login

- Log in at http://localhost:4200/login as the role named in the row, **then** click the link. If you click while logged out, or logged in as another role, the app sends you to the login page or that role's home page. Log in as the right role and click the link again.
- The session is held per browser, so only one role can be logged in at a time. Use a private window for a second role.
- Start the stack with `make  up` if the links do not open. Everything is sandbox data, and every bank or lender event is SIMULATED.
- Concurrency (simultaneous actions) cannot be judged by eye. For those items, use the automated TC-RACE results.

2.1 Merchant and supplier approval

Automated: **100%**

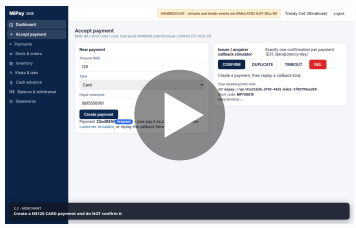

Recorded walkthrough on the live sandbox (48 s, 7 screenshots)
Play video: 2-1-merchant-and-supplier-approval.mp4
Open screenshots folder · Open in the evidence player (video + live link)
Seen in the live app: TPTS Ops: the pending bank-account change cannot be approved: the page shows 'Selected request is already PENDING_APPROVAL' and no Approve/Reject buttons
setup (not recorded): registered fictional merchant 0819173187 via POST /api/onboarding/merchant -> HTTP 200

Log in as	Live page (click)	Do this	Pass if you see	Your verdict
TPTS Ops	http://localhost:4200/ops/approvals	Open the Merchant, Supplier and Bank-account-change queues. Approve one pending merchant.	Pending parties are listed and cannot trade until approved. The approved merchant moves out of the queue.	☐ Pass ☐ Fail
Supplier	http://localhost:4200/supplier/accounts	Submit a receiving-account change.	The change shows PENDING. In /ops/approvals a different person (Ops) can approve it. Current build: Ops sees 'already PENDING_APPROVAL' and no Approve button (see the recording).	☐ Pass ☐ Fail
Overall	BC p.18: Unapproved parties blocked; verified receiving account changes require independent approval.			☐ Pass ☐ Fail

2.2 Acceptance and availability

Automated: **80%**

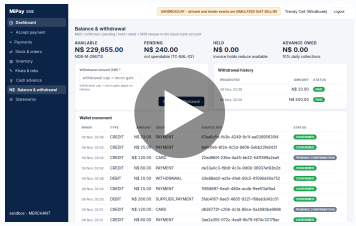

Recorded walkthrough on the live sandbox (49 s, 8 screenshots)
Play video: 2-2-acceptance-and-availability.mp4
Open screenshots folder · Open in the evidence player (video + live link)

Log in as	Live page (click)	Do this	Pass if you see	Your verdict
Merchant	http://localhost:4200/merchant/accept	Create a N$60 QR payment, then press CONFIRM in the callback simulator.	Status CONFIRMED once. On /merchant/balance, Available goes up by N$60.	☐ Pass ☐ Fail
Merchant	http://localhost:4200/merchant/accept	Create a N$120 CARD payment. Do not confirm it yet. Open /merchant/balance.	The Pending tile shows N$120 and Available is unchanged. Available rises only after CONFIRM. Known gap: QR payments do not show in Pending before confirmation.	☐ Pass ☐ Fail
No login	http://localhost:4200/customer	Pay the merchant's short code (from /merchant/accept) as a customer.	The payment succeeds and appears once in /merchant/payments.	☐ Pass ☐ Fail
Overall	BC p.18: Payment confirmed once; pending card proceeds never increase spendable funds prematurely.			☐ Pass ☐ Fail

2.3 Pay from balance

Automated: **100%**

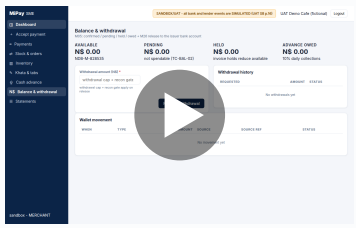

Recorded walkthrough on the live sandbox (46 s, 7 screenshots)
Play video: 2-3-pay-from-balance.mp4
Open screenshots folder · Open in the evidence player (video + live link)

Log in as	Live page (click)	Do this	Pass if you see	Your verdict
Merchant	http://localhost:4200/merchant/orders	Order 1 unit from the Kamati catalogue.	The order is listed as SUBMITTED.	☐ Pass ☐ Fail
Supplier	http://localhost:4200/supplier/orders	Press 'Issue invoice' on that order.	One invoice with a unique reference is issued.	☐ Pass ☐ Fail
Merchant	http://localhost:4200/merchant/orders	Select the invoice and press 'Pay via EFT' or 'Pay via book transfer'.	Invoice PAID. On /merchant/balance there is one debit under Wallet movement, and the supplier's invoice detail shows one payment.	☐ Pass ☐ Fail
Overall	BC p.18: MSME authorises invoice in TPTS; atomic debit, supplier credit and invoice match use one transaction reference.			☐ Pass ☐ Fail

2.4 Insufficient balance

Automated: **100%**

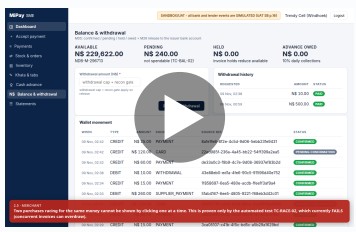

Recorded walkthrough on the live sandbox (46 s, 6 screenshots)
Play video: 2-4-insufficient-balance.mp4
Open screenshots folder · Open in the evidence player (video + live link)
setup (not recorded): fictional merchant 0819173112 registered and approved via API (register HTTP 200)

Log in as	Live page (click)	Do this	Pass if you see	Your verdict
Merchant	http://localhost:4200/merchant/orders	Try to pay an invoice larger than Available. If needed, first withdraw on /merchant/balance to bring Available down.	Refused with a shortfall message. Available does not go negative, and no hold or debit is created.	☐ Pass ☐ Fail
Overall	BC p.18: Purchase refused or separately approved/funded advance offered; no hidden overdraft.			☐ Pass ☐ Fail

2.5 Concurrent orders

Automated: **80%**

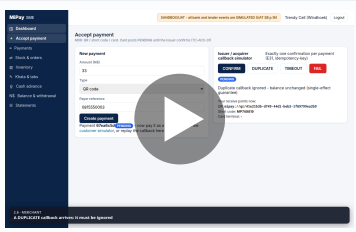

Recorded walkthrough on the live sandbox (13 s, 2 screenshots)
Play video: 2-5-concurrent-orders.mp4
Open screenshots folder · Open in the evidence player (video + live link)

Log in as	Live page (click)	Do this	Pass if you see	Your verdict
Merchant	http://localhost:4200/merchant/balance	Start an invoice payment and watch the Held tile.	Held rises and Available falls by the same amount. The hold converts to a debit, or is released if the payment fails. True simultaneous spending cannot be checked by eye: rely on TC-RACE-02, which currently FAILS.	☐ Pass ☐ Fail
Overall	BC p.18: Two purchases cannot both spend the same available amount. Holds and their release reconcile.			☐ Pass ☐ Fail

2.6 Timeout and duplicate

Automated: **100%**

Recorded walkthrough on the live sandbox (31 s, 5 screenshots)
Play video: 2-6-timeout-and-duplicate.mp4
Open screenshots folder · Open in the evidence player (video + live link)

Log in as	Live page (click)	Do this	Pass if you see	Your verdict
Merchant	http://localhost:4200/merchant/accept	Create a payment and press TIMEOUT, then CONFIRM, then DUPLICATE.	After TIMEOUT it stays PENDING. CONFIRM completes it. DUPLICATE is ignored, and Available rises only once.	☐ Pass ☐ Fail
Merchant	http://localhost:4200/merchant/payments	Open that payment.	The event trail shows a single confirmation and the duplicate marked as ignored.	☐ Pass ☐ Fail
Overall	BC p.18: Pending preserved; no duplicate debit, supplier credit or stock adjustment after retries.			☐ Pass ☐ Fail

2.7 Advance eligibility

Automated: **100%**

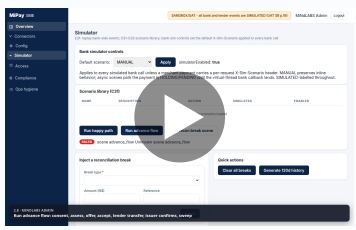

Recorded walkthrough on the live sandbox (23 s, 2 screenshots)
Play video: 2-7-advance-eligibility.mp4
Open screenshots folder · Open in the evidence player (video + live link)

Log in as	Live page (click)	Do this	Pass if you see	Your verdict
Merchant	http://localhost:4200/merchant/advance	Read the '2. Eligibility' card.	'Rules applied' lists exclude_advance, exclude_self_transfer and exclude_circular. The eligible total excludes them.	☐ Pass ☐ Fail
Admin	http://localhost:4200/admin/config	Under Business rules, view the exclusion rules.	The exclusion rules are listed and can be toggled. Each change is audited.	☐ Pass ☐ Fail
Overall	BC p.18: Loan proceeds, own transfers and circular B2B activity excluded from verified sales.			☐ Pass ☐ Fail

2.8 Advance funding

Automated: **80%**

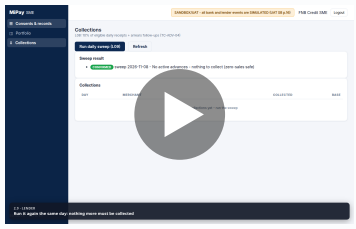

Recorded walkthrough on the live sandbox (32 s, 4 screenshots)
Play video: 2-8-advance-funding.mp4
Open screenshots folder · Open in the evidence player (video + live link)
Seen in the live app: Mindlabs Admin: 'Run advance flow' failed in the live app (FAILED scene advance_flow Unknown scene advance_flow)

Log in as	Live page (click)	Do this	Pass if you see	Your verdict
Merchant	http://localhost:4200/merchant/advance	Grant consent, request an assessment, then press 'Accept offer'.	Status ACCEPTED. Available on /merchant/balance does NOT change.	☐ Pass ☐ Fail
Admin	http://localhost:4200/admin/simulator	Press 'Run advance flow'.	Every step is green: consent, assess, offer, fund (issuer confirms), sweep. Funds become available only at the fund step. UI gap: there is no 'Fund' button for the lender or merchant, and in the current build this button fails with 'Unknown scene advance_flow' (see the recording), so funding cannot currently be shown in the UI.	☐ Pass ☐ Fail
Overall	BC p.18: Approval alone adds no funds; actual lender transfer and issuer confirmation required.			☐ Pass ☐ Fail

2.9 Repayment mandate

Automated: **100%**

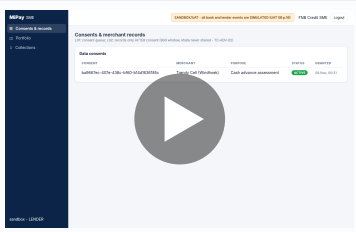

Recorded walkthrough on the live sandbox (25 s, 3 screenshots)
Play video: 2-9-repayment-mandate.mp4
Open screenshots folder · Open in the evidence player (video + live link)

Log in as	Live page (click)	Do this	Pass if you see	Your verdict
Lender	http://localhost:4200/lender/collections	Press 'Run daily sweep'.	It collects 10% of that day's eligible sales. A zero-sales day collects nothing, and running it again the same day collects nothing more.	☐ Pass ☐ Fail
Merchant	http://localhost:4200/merchant/advance	View '3. Current advance'.	The repayments table matches the sweep, and the amount owed falls by the collected amount.	☐ Pass ☐ Fail
Overall	BC p.18: Only eligible receipts and remaining debt used; refund, zero-sales and maturity cases handled correctly.			☐ Pass ☐ Fail

2.10 Consent and Khata

Automated: **100%**

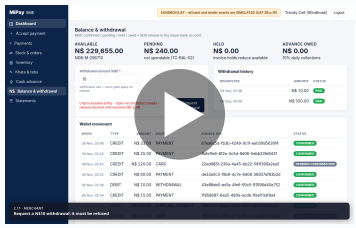

Recorded walkthrough on the live sandbox (21 s, 3 screenshots)
Play video: 2-10-consent-and-khata.mp4
Open screenshots folder · Open in the evidence player (video + live link)

Log in as	Live page (click)	Do this	Pass if you see	Your verdict
Merchant	http://localhost:4200/merchant/advance	Grant a data consent.	The named lender, purpose, data fields and retention are shown. It can be withdrawn.	☐ Pass ☐ Fail
Lender	http://localhost:4200/lender	Open the merchant's records.	Records are visible only after consent and contain no customer-level Khata. After consent is withdrawn they are refused.	☐ Pass ☐ Fail
Overall	BC p.18: Data shared only for agreed purpose; customer-level Khata lending feed excluded by default.			☐ Pass ☐ Fail

2.11 Reconciliation

Automated: **88%**

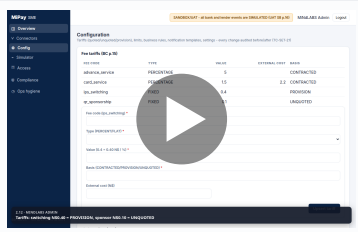

Recorded walkthrough on the live sandbox (65 s, 6 screenshots)
Play video: 2-11-reconciliation.mp4
Open screenshots folder · Open in the evidence player (video + live link)

Log in as	Live page (click)	Do this	Pass if you see	Your verdict
TPTS Ops	http://localhost:4200/ops/recon	Press 'Run reconciliation'.	A clean run: issuer, subledger and credit-ledger totals match, with 0 breaks.	☐ Pass ☐ Fail
Admin	http://localhost:4200/admin/simulator	Inject a reconciliation break, then re-run reconciliation on /ops/recon.	The break is flagged, and a withdrawal on /merchant/balance is BLOCKED until it is resolved.	☐ Pass ☐ Fail
Overall	BC p.18: Issuer assets/liabilities, merchant subledger, B2B transfer and credit ledger match with no unexplained differences.			☐ Pass ☐ Fail

2.12 Fees and billing

Automated: **100%**

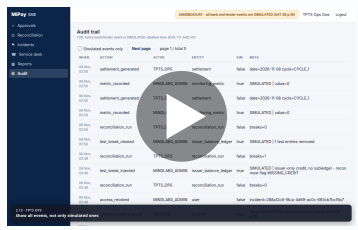

Recorded walkthrough on the live sandbox (27 s, 3 screenshots)
Play video: 2-12-fees-and-billing.mp4
Open screenshots folder · Open in the evidence player (video + live link)

Log in as	Live page (click)	Do this	Pass if you see	Your verdict
TPTS Ops	http://localhost:4200/ops/reports	Load the fee report for today.	Each fee appears once per event, with external cost and contribution shown separately.	☐ Pass ☐ Fail
Admin	http://localhost:4200/admin/config	Review the Fee tariffs.	Switching N$0.40 and sponsor N$0.10 are labelled as provisions, and IPS P2M is N$0. Check the card fee: it is seeded at 1.50%, while BC p.16 says 2.50%.	☐ Pass ☐ Fail
Overall	BC p.18: Apply the agreed tariff once; reconcile operator, interchange and sponsor charges; no unauthorised merchant debit.			☐ Pass ☐ Fail

2.13 Security and recovery

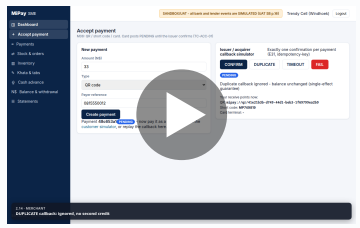

Automated: **100%**

Recorded walkthrough on the live sandbox (34 s, 4 screenshots)
Play video: 2-13-security-and-recovery.mp4
Open screenshots folder · Open in the evidence player (video + live link)

Log in as	Live page (click)	Do this	Pass if you see	Your verdict
Merchant	http://localhost:4200/ops/approvals	While logged in as the merchant, open this ops link.	You are redirected to /merchant. Merchants cannot reach ops pages.	☐ Pass ☐ Fail
TPTS Ops	http://localhost:4200/ops/audit	Tick ‘Simulated events only’, then clear it.	Privileged actions are listed with actor, time and before/after values.	☐ Pass ☐ Fail
Admin	http://localhost:4200/admin/hygiene	Press ‘Backup now’, then run a restore test.	The restore test is recorded with RTO under 2 h and RPO = 0.	☐ Pass ☐ Fail
Overall	BC p.18: Cross-merchant access prevented; privileged actions logged; restore and ledger recovery tested.			☐ Pass ☐ Fail

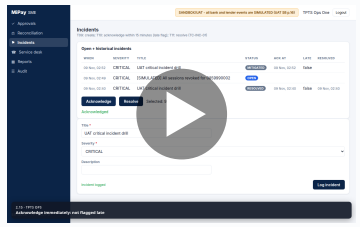

2.14 Demonstration script (BC p.17)

Recorded walkthrough on the live sandbox (175 s, 18 screenshots)
Play video: 2-14-demo-script.mp4
Open screenshots folder · Open in the evidence player (video + live link)
Seen in the live app: Mindlabs Admin: 'Run advance flow' failed in the live app (FAILED scene advance_flow Unknown scene advance_flow)
setup (not recorded): registered fictional merchant 0819198025 ('UAT Demo Cafe', stands in for Selma's café) via POST /api/onboarding/merchant -> HTTP 200

Demonstration step	Live pages (click)	Automated	Your verdict
Onboard Ndapewa's shop, Selma's café and synthetic Kamati Wholesale (labelled fictional)	TPTS Ops: http://localhost:4200/ops/approvals Supplier: http://localhost:4200/supplier/catalogue	100%	☐ Pass ☐ Fail
Accept a verified customer payment; show available and pending separately	Merchant: http://localhost:4200/merchant/accept Merchant: http://localhost:4200/merchant/balance	75%	☐ Pass ☐ Fail
Pay a N$6,000 supplier invoice from balance incl. timeout and duplicate callback	Merchant: http://localhost:4200/merchant/orders Supplier: http://localhost:4200/supplier/orders	100%	☐ Pass ☐ Fail
Show 90–120 days synthetic data, eligibility calc, consent and lender review	Admin: http://localhost:4200/admin/simulator Merchant: http://localhost:4200/merchant/advance Lender: http://localhost:4200/lender	100%	☐ Pass ☐ Fail
Fund a N$10,000 advance, spend it on stock, collect only the authorised share	Admin: http://localhost:4200/admin/simulator Lender: http://localhost:4200/lender/collections	100%	☐ Pass ☐ Fail

2.15 Exit-criteria checks visible on screen (BC p.18)

Recorded walkthrough on the live sandbox (26 s, 4 screenshots)
Play video: 2-15-exit-criteria-checks.mp4
Open screenshots folder · Open in the evidence player (video + live link)

Check	Log in as	Live page (click)	Pass if you see	Your verdict
Service targets: health and load	Admin	http://localhost:4200/admin	The health tiles show the database up, the load-test TPS (gate: 20 TPS) and 0 open critical incidents. The 99.9% availability figure is only in the health API (TC-PERF-02), not on this page.	☐ Pass ☐ Fail
Critical incident acknowledged within 15 minutes	TPTS Ops	http://localhost:4200/ops/incidents	Log an incident and acknowledge it. It is not flagged late.	☐ Pass ☐ Fail
Every bank and lender event labelled SIMULATED	TPTS Ops	http://localhost:4200/ops/audit	The sandbox banner is visible and simulated events carry the SIMULATED flag.	☐ Pass ☐ Fail

The 20 TPS × 30-minute peak test and the concurrency tests cannot be judged on screen. Use the automated results in section 1.2 and section 7.2.

2.16 Sign-off

Tester name	Organisation / role	Date tested

Overall UAT verdict

☐ **Accepted** ☐ **Accepted with conditions** ☐ **Rejected**

3. How compliance is measured

Compliance is measured by **test-case coverage of each UAT module**. The required test cases (TC-IDs) for each module come from the traceability matrix in `docs/UAT-BACKEND-TEST-PACK.md`, which maps every TC-ID to the storyboard (SB) and business-case (BC) pages it proves. Each TC-ID is assessed from the JUnit results of the backend UAT pack. The pack runs the real Spring Boot services, HTTP layer, security and database with no mocked business logic.

Measure	Formula	Meaning
Coverage %	required TC-IDs with at least one automated test ÷ required TC-IDs	How much of the module is evidenced by a test
Compliance %	required TC-IDs whose tests all PASS ÷ required TC-IDs	How much of the module is proven to behave as specified

TC status	Rule
PASS	Every automated test asserting this TC-ID passed.
FAIL	At least one test asserting this TC-ID failed. Counts against compliance.
PARTIAL	Implemented, but a spec test is disabled for a known defect, or the evidence run was shortened (e.g. TC-PERF-01 short load run). Counts against compliance.
NOT COVERED	TC-ID is defined for the module but no automated test asserts it. Counts against coverage and compliance.

“Where” evidence cites the implementing backend source (file:line), the REST endpoint and the frontend screen (route) for each capability. Production-only conditions from BC p.18 (signed agreements, certification, funded facility) are outside the software UAT and are listed separately in section 7.

4. Coverage by UAT module

Across **132** required test cases in **13** UAT modules, **131** have an automated test (**99.2% coverage**) and **122** pass in full (**92.4% compliance**). Money & security modules: 45/50 (90.0%). Other modules: 77/82 (93.9%).

UAT module	BC / SB reference	Req.	Covered	Pass	Coverage	Compliance
Sandbox setup & configuration	BC p.15–17 (tariffs, native-IPP exclusion), p.7 (limits)	31	30	30	97%	**96.8%**
Merchant & supplier onboarding / approval	BC p.18 'Merchant and supplier approval'	4	4	4	100%	**100.0%**
Payment acceptance (QR, short code, card)	BC p.18 'Acceptance and availability', 'Timeout and duplicate'	6	6	6	100%	**100.0%**
Merchant balance (available / pending / held / owed)	BC p.7 balance controls	5	5	4	100%	**80.0%**
B2B stock purchase — pay supplier from balance	BC p.9	10	10	10	100%	**100.0%**
Verified records, consent & eligibility data	BC p.10	6	6	6	100%	**100.0%**
Merchant cash advance (offer, fund, sales-based repayment)	BC p.11	6	6	6	100%	**100.0%**
Reconciliation, fees & statements	BC p.18 'Reconciliation', 'Fees and billing'	4	4	4	100%	**100.0%**
Security & recovery	BC p.18 'Security and recovery'	6	6	6	100%	**100.0%**
Operations, merchant tools & compliance consoles	BC p.6 merchant tools	30	30	27	100%	**90.0%**
Performance & service targets	BC p.18 UAT exit: 20 TPS × 30 min	3	3	2	100%	**66.7%**
Storyboard scenes 1–8 (demonstration runner)	BC p.17 demonstration script	8	8	8	100%	**100.0%**
Concurrency / race-condition safety (supplementary)	BC p.18 'Concurrent orders', 'Timeout and duplicate'	13	13	9	100%	**69.2%**
All modules		**132**	**131**	**122**	**99%**	**92.4%**

money- or security-critical module (BC p.18: must pass 100%). Req. = required test cases defined for the module; Covered = required cases with at least one automated test; Pass = covered cases whose tests all pass.

5. UAT delivery plan and demonstration script (BC p.17)

Window	Required delivery (BC p.17)	Modules	Compliance
Days 1–5	Agreed bank/issuer route, journeys, balance fields, advance model, gap register	Sandbox setup & configuration	**96.8%** (30/31)
Days 6–12	Merchant onboarding, QR/card simulator, available/pending balance and reconciled ledger	Merchant & supplier onboarding / approval, Payment acceptance (QR, short code, card), Merchant balance (available / pending / held / owed)	**93.3%** (14/15)
Days 13–20	Supplier invoice, pay-from-balance, holds, duplicate controls and withdrawal	B2B stock purchase — pay supplier from balance	**100.0%** (10/10)
Days 21–25	Verified-data summary, consent, lender decision, funded advance, repayment simulation	Verified records, consent & eligibility data, Merchant cash advance (offer, fund, sales-based repayment)	**100.0%** (12/12)
Days 26–30	Negative cases, reconciliation, fixes, acceptance evidence, demonstration	Reconciliation, fees & statements, Security & recovery, Performance & service targets, Storyboard scenes 1–8 (demonstration runner), Concurrency / race-condition safety (supplementary)	**85.3%** (29/34)

Demonstration step (BC p.17)	Evidencing test cases	Compliance
Onboard Ndapewa's shop, Selma's café and synthetic Kamati Wholesale (labelled fictional)	TC-ONB-01, TC-ONB-02, Scene 1, TC-SET-31	**100%**
Accept a verified customer payment; show available and pending separately	TC-ACC-01, TC-ACC-03, TC-BAL-01, TC-BAL-02	**75%**
Pay a N$6,000 supplier invoice from balance incl. timeout and duplicate callback	TC-B2B-02, TC-B2B-03, TC-B2B-04, Scene 3, Scene 2, Scene 4	**100%**
Show 90–120 days synthetic data, eligibility calc, consent and lender review	TC-SET-30, TC-SET-20, TC-REC-01, TC-REC-02, TC-SET-24	**100%**
Fund a N$10,000 advance, spend it on stock, collect only the authorised share	TC-ADV-02, TC-ADV-03, TC-B2B-06, Scene 6	**100%**

6. Module-by-module evidence

For each UAT module: where it is implemented, every required test case with its automated test and result, and the resulting coverage and compliance.

6.1 Sandbox setup & configuration

96.8% compliance
97% coverage

Business case: BC p.15–17 (tariffs, native-IPP exclusion), p.7 (limits) · **Storyboard:** SB p.16 Days 1–5 · **UAT window:** Days 1–5

Where it is implemented

Capability	Backend source	API	UI screen
Connectors / capability matrix	`…/sme/service/ConnectorService.java`	`/api/admin/connectors`	localhost:4200/admin/connectors
Tariffs, limits, rules, settings	`…/sme/service/AdminService.java:63-187`	`/api/admin/tariffs · /limits · /rules · /settings`	localhost:4200/admin/config
Seeded sandbox (tariffs, lender, rules)	`…/sme/config/DataSeeder.java:95-226`	–	—
Synthetic history / scene runner	`…/sme/service/SimulationService.java:164, 316`	`/api/admin/sim/* · /scenes/run`	localhost:4200/admin/simulator

Test cases — 31 required · 30 covered · 30 pass · 0 fail · 0 partial · 1 not covered

TC-ID	Automated test (class · line) and what it asserts	Result
TC-SET-01	`TUat01SetupConfigurationTests:33` — Bank/issuer connector configured + health-checked in sandbox	PASS
TC-SET-02	`TUat01SetupConfigurationTests:54` — Capability matrix: native IPP B2B excluded at go-live (BC p.9/p.17)	PASS
TC-SET-03	`TUat01SetupConfigurationTests:69` — Balance account mapped to issuer account ref; legal holder recorded (E04/E05)	PASS
TC-SET-04	`TUat01SetupConfigurationTests:87` — Credential rotation revokes old secret and is audited	PASS
TC-SET-05	`TUat01SetupConfigurationTests:111` — Connector-down state is recorded (money stays pending — see TC-ACC-05)	PASS
TC-SET-06	`TUat01SetupConfigurationTests:128` — Lender adapter contract endpoints configured (E10/E11)	PASS
TC-SET-07	`TUat01SetupConfigurationTests:157` — Consent data fields: customer-level Khata excluded by default (BC p.12)	PASS
TC-SET-08	`TUat01SetupConfigurationTests:142` — IPS, card, QR and notification connectors all initialisable	PASS
TC-SET-09	`TUat14SetupOpsCompletionTests:42` — Environment descriptor: sandbox, simulated banner for the UAT panel	PASS
TC-SET-10	`TUat01SetupConfigurationTests:178` — Card tariff billed 1.50% vs external 2.20%, basis CONTRACTED (BC p.15/16)	PASS
TC-SET-11	`TUat01SetupConfigurationTests:194` — Switching N$0.40 labelled 'budgeting provision, not contracted' (BC p.15)	PASS
TC-SET-12	`TUat01SetupConfigurationTests:207` — Sponsor N$0.10 labelled 'unquoted provision' (BC p.15)	PASS
TC-SET-13	`TUat01SetupConfigurationTests:220` — IPS P2M customer fee statutory N$0; interchange shown as cost (BC p.16)	PASS
TC-SET-14	`TUat01SetupConfigurationTests:229` — Fee codes tariffed; reversal status available (fee pack prerequisite)	PASS
TC-SET-15	`TUat01SetupConfigurationTests:229` — Fee codes tariffed; reversal status available (fee pack prerequisite) `TUat08ReconFeesStatementsTests:165` — Fee reversal on full refund; re-reversal is a no-op	PASS
TC-SET-16	`TUat01SetupConfigurationTests:259` — Only TPTS_OPS can act on the merchant approval queue (role gate)	PASS
TC-SET-17	`TUat01SetupConfigurationTests:277` — Bank-account queue readable by TPTS_OPS; supplier role gets 403	PASS
TC-SET-18	`TUat09SecurityRecoveryTests:70` — Role matrix hard gates: opsadminlendersuppliermerchant	PASS

TC-ID	Automated test (class · line) and what it asserts	Result
TC-SET-19	`TUat09SecurityRecoveryTests:70` — Role matrix hard gates: opsadminlendersuppliermerchant `TUat14SetupOpsCompletionTests:52` — Settings console: list + upsert admin-only; values survive a re-read	PASS
TC-SET-20	`TUat14SetupOpsCompletionTests:72` — Synthetic history seeding: requested window, SIMULATED-labelled, drives eligibility	PASS
TC-SET-21	`TUat09SecurityRecoveryTests:100` — Privileged actions audited with actor and before/after	PASS
TC-SET-22	`TUat01SetupConfigurationTests:238` — Limit profile persisted; daily withdrawal cap enforced (BC p.7)	PASS
TC-SET-23	`TUat08ReconFeesStatementsTests:116` — Stale holds are expired by the recon run and flagged (C22)	PASS
TC-SET-24	`TUat07AdvanceTests:192` — Offer capped by lesser-of rule: min(N$25,000, 20% avg monthly, lender limit) `TUat07AdvanceTests:221` — Assessment declines without sufficient history or revenue	PASS
TC-SET-25	`TUat07AdvanceTests:245` — New draws pause when 30-day arrears exceed the trigger (BC p.19)	PASS
TC-SET-26	`TUat14SetupOpsCompletionTests:72` — Synthetic history seeding: requested window, SIMULATED-labelled, drives eligibility	PASS
TC-SET-27	`TUat01SetupConfigurationTests:291` — Eligibility exclusion rules configured and toggleable (C23) `TUat06RecordsConsentTests:149` — Toggling exclusion rules changes eligibility computation (C23)	PASS
TC-SET-28	`TUat12SceneRunnerTests:138` — All simulation-layer audit entries are labelled simulated=true (E34) `TUat12SceneRunnerTests:35` — Scenario catalogue lists all eight labelled scenes (E33)	PASS
TC-SET-29	No automated test asserts this TC-ID.	NOT COVERED
TC-SET-30	`TUat06RecordsConsentTests:171` — Synthetic 90–120 day history generator produces eligibility-usable data	PASS
TC-SET-31	`TUat14SetupOpsCompletionTests:92` — Sandbox seeder is idempotent: a second full run changes nothing	PASS

6.2 Merchant & supplier onboarding / approval

100.0% compliance
100% coverage

Business case: BC p.18 'Merchant and supplier approval'; p.9 supplier onboarding · **Storyboard:** SB p.8 Scene 1 · **UAT window:** Days 6–12

Where it is implemented

Capability	Backend source	API	UI screen
Register merchant / supplier	`…/sme/service/OnboardingService.java:57, 86`	`POST /api/onboarding/merchant · /supplier`	localhost:4200/login (register)
TPTS approval + provisioning (balance, QR, short code)	`…/sme/service/OnboardingService.java:122, 175`	`POST /api/ops/approvals/merchants/{id}`	localhost:4200/ops/approvals
Supplier bank-account change, 4-eyes approval	`…/sme/service/OnboardingService.java:235, 267`	`POST /api/supplier/bank-accounts/change · /api/ops/approvals/bank-accounts/{id}`	localhost:4200/supplier/accounts · localhost:4200/ops/approvals
Unapproved merchant gate	`…/sme/service/PaymentService.java:61`	`all merchant money endpoints`	—

Test cases — 4 required · 4 covered · 4 pass · 0 fail · 0 partial · 0 not covered

TC-ID	Automated test (class · line) and what it asserts	Result
TC-ONB-01	`TUat02OnboardingTests:28` — Merchant KYC -> TPTS approval provisions balance account, QR, short code	PASS
TC-ONB-02	`TUat02OnboardingTests:64` — Supplier onboarding: owners, receiving account approval, catalogue provisioning	PASS
TC-ONB-03	`TUat02OnboardingTests:92` — Supplier bank-account change requires an approver different from the requester	PASS
TC-ONB-04	`TUat02OnboardingTests:126` — Unapproved merchant refused: payments, orders and credit all blocked	PASS

6.3 Payment acceptance (QR, short code, card)

100.0% compliance
100% coverage

Business case: BC p.18 'Acceptance and availability', 'Timeout and duplicate' · **Storyboard:** SB p.9 Scene 2 · **UAT window:** Days 6–12 · **money/security-critical**

Where it is implemented

Capability	Backend source	API	UI screen
Accept / confirm / fail / refund	`…/sme/service/PaymentService.java: 74, 161, 214, 236`	`POST /api/merchant/payments` · `/payments/{id}/simulate` · `/refund`	localhost:4200/merchant/accept · localhost:4200/merchant/payments
Customer QR / short-code pay	`…/sme/web/CustomerController.java: 38, 57`	`GET /api/customer/lookup` · `POST /api/customer/pay`	localhost:4200/customer (simulator)
Speaker confirmation log	`…/sme/service/PaymentService.java: 293`	`GET /api/merchant/speaker-log`	localhost:4200/merchant (dashboard)

Test cases — 6 required · 6 covered · 6 pass · 0 fail · 0 partial · 0 not covered

TC-ID	Automated test (class · line) and what it asserts	Result
TC-ACC-01	`TUat03AcceptanceTests:40` — QR payment confirmed exactly once; funds available; single speaker confirmation	PASS
TC-ACC-02	`TUat03AcceptanceTests:66` — Basic-phone short-code payment: lookup + pay via real API	PASS
TC-ACC-03	`TUat03AcceptanceTests:92` — Card sale is PENDING and not spendable until acquirer releases; fee applied once `TUat03AcceptanceTests:115` — Card charge failure reverses the pending rows; no funds moved	PASS
TC-ACC-04	`TUat03AcceptanceTests:130` — Duplicate bank callback: no second debit/credit/stock adjustment (BC p.18)	PASS
TC-ACC-05	`TUat03AcceptanceTests:158` — Bank timeout keeps payment PENDING; later final answer still completes	PASS
TC-ACC-06	`TUat03AcceptanceTests:178` — Holds reduce available balance and release on failure (TC-BAL-03 companion)	PASS

6.4 Merchant balance (available / pending / held / owed)

80.0% compliance
100% coverage

Business case: BC p.7 balance controls; p.8 worked journey · **Storyboard:** SB p.7 · **UAT window:** Days 6–12 · **money/security-critical**

Where it is implemented

Capability	Backend source	API	UI screen
Issuer ledger + merchant subledger posting	`…/sme/service/LedgerService.java:57, 90, 102`	–	—
Balance view (four amounts)	`…/sme/service/LedgerService.java:210, 224`	`GET /api/merchant/balance`	localhost:4200/merchant/balance · localhost:4200/merchant (dashboard)
Holds: create / convert / release / expire	`…/sme/service/LedgerService.java:266–296`	–	localhost:4200/merchant/balance (Held tile)

Test cases — 5 required · 5 covered · 4 pass · 0 fail · 1 partial · 0 not covered

TC-ID	Automated test (class · line) and what it asserts	Result
TC-BAL-01	`TUat04BalanceTests:67` — tcBal01_qrPendingDisplaySpecConformant [SKIP:] `TUat04BalanceTests:38` — Available increases only after the issuer confirms (BC p.8)	PARTIAL
TC-BAL-02	`TUat04BalanceTests:80` — Pending is never spendable until confirmed	PASS
TC-BAL-03	`TUat04BalanceTests:92` — Hold reduces available; release restores it (UAT SB p.15)	PASS
TC-BAL-04	`TUat04BalanceTests:108` — Owed displayed separately from sales proceeds, never mixed	PASS
TC-BAL-05	`TUat04BalanceTests:127` — Issuer ledger (authoritative) and subledger (mirror) agree per owner	PASS

6.5 B2B stock purchase — pay supplier from balance

100.0% compliance
100% coverage

Business case: BC p.9; p.18 'Pay from balance', 'Insufficient balance', 'Concurrent orders' · **Storyboard:** SB p.10–11 Scenes 3–4 · **UAT window:** Days 13–20 · **money/security-critical**

Where it is implemented

Capability	Backend source	API	UI screen
Order to invoice (unique ref)	`…/sme/service/B2BPaymentService.java:73, 111`	`POST /api/merchant/orders · /api/supplier/orders/{id}/invoice`	localhost:4200/merchant/orders · localhost:4200/supplier/orders
Pay from balance: lock, availability check, hold, book transfer/EFT	`…/sme/service/B2BPaymentService.java:149–201`	`POST /api/merchant/invoices/{id}/pay`	localhost:4200/merchant/orders (Pay from balance)
Timeout retry	`…/sme/service/B2BPaymentService.java:244`	`POST /api/merchant/invoices/{id}/retry-timeout`	localhost:4200/merchant/orders
Withdrawal (locked, capped, recon-gated)	`…/sme/service/WithdrawalService.java:43–84`	`POST /api/merchant/withdrawals`	localhost:4200/merchant/balance

Test cases — 10 required · 10 covered · 10 pass · 0 fail · 0 partial · 0 not covered

TC-ID	Automated test (class · line) and what it asserts	Result
TC-B2B-01	`TUat05B2bPaymentTests:51` — Supplier invoice carries unique reference from a verified supplier	PASS
TC-B2B-02	`TUat05B2bPaymentTests:65` — Pay from balance is atomic: one debit, one supplier credit, invoice PAID	PASS
TC-B2B-03	`TUat05B2bPaymentTests:105` — Replayed bank confirmation absorbed by idempotency — no double debit/credit	PASS
TC-B2B-04	`TUat05B2bPaymentTests:125` — Bank timeout: hold preserved, invoice unpaid; retry with final answer completes	PASS
TC-B2B-05	`TUat05B2bPaymentTests:150` — Insufficient balance refused — shortfall reported, no overdraft (UAT SB p.11)	PASS
TC-B2B-06	`TUat05B2bPaymentTests:167` — Insufficient -> advance funded -> issuer confirms -> payment allowed (Option B)	PASS
TC-B2B-07	`TUat05B2bPaymentTests:196` — Bank failure: hold released, invoice stays unpaid, retry possible	PASS
TC-B2B-08	`TUat05B2bPaymentTests:215` — Concurrent orders: only one can spend the available amount	PASS
TC-B2B-09	`TUat05B2bPaymentTests:267` — Refund linked to original sale: adjusts records, no double credit	PASS
TC-B2B-10	`TUat05B2bPaymentTests:295` — Hold lifecycle is visible on the merchant; expiry guard exists	PASS

6.6 Verified records, consent & eligibility data

100.0% compliance
100% coverage

Business case: BC p.10; p.18 'Advance eligibility', 'Consent and Khata' · **Storyboard:** SB p.12 Scene 5 · **UAT window:** Days 21–25

Where it is implemented

Capability	Backend source	API	UI screen
Consent grant / withdraw (named lender, purpose, fields, retention)	`…/sme/service/AdvanceService.java:106, 130`	`POST /api/merchant/advance/consent · /consents/{id}/withdraw`	localhost:4200/merchant/advance
Eligibility with exclusion rules (advance, self, circular)	`…/sme/service/AdvanceService.java:209–290`	`GET /api/merchant/advance/eligibility · /api/lender/records/{id}`	localhost:4200/merchant/advance · localhost:4200/lender

Test cases — 6 required · 6 covered · 6 pass · 0 fail · 0 partial · 0 not covered

TC-ID	Automated test (class · line) and what it asserts	Result
TC-REC-01	`TUat06RecordsConsentTests:28` — Verified records: receipts net of refunds, trading days, monthly seasonality	PASS
TC-REC-02	`TUat06RecordsConsentTests:62` — Consent captured with named lender, purpose, fields and retention (BC p.12)	PASS

TC-ID	Automated test (class · line) and what it asserts	Result
TC-REC-03	`TUat06RecordsConsentTests:84` — Withdrawal stops future disclosure and blocks new assessments (BC p.12)	PASS
TC-REC-04	`TUat06RecordsConsentTests:114` — Khata never part of the feed; merchant records view has no customer-level data	PASS
TC-REC-05	`TUat06RecordsConsentTests:127` — Self-transfers and circular B2B excluded from verified sales (AML alert raised)	PASS
TC-REC-06	`TUat06RecordsConsentTests:190` — Assessment requires merchant to be approved first	PASS

6.7 Merchant cash advance (offer, fund, sales-based repayment)

100.0% compliance
100% coverage

Business case: BC p.11; p.18 'Advance funding', 'Repayment mandate' · **Storyboard:** SB p.11, p.13 Scene 6 · **UAT window:** Days 21–25 · **money/security-critical**

Where it is implemented

Capability	Backend source	API	UI screen
Assessment & offer (lesser-of cap)	`…/sme/service/AdvanceService.java:164`	`POST /api/merchant/advance/request · /api/lender/assess`	localhost:4200/merchant/advance · localhost:4200/lender
Accept to fund (issuer-confirmed credit)	`…/sme/service/AdvanceService.java:363, 378`	`POST /api/merchant/advance/{id}/accept · /api/lender/advances/{id}/fund`	localhost:4200/merchant/advance · localhost:4200/lender
Daily sweep of eligible sales; arrears pause	`…/sme/service/AdvanceService.java:440, 484`	`POST /api/lender/sweep`	localhost:4200/lender/collections · localhost:4200/lender/portfolio

Test cases — 6 required · 6 covered · 6 pass · 0 fail · 0 partial · 0 not covered

TC-ID	Automated test (class · line) and what it asserts	Result
TC-ADV-01	`TUat07AdvanceTests:32` — Lender approval alone adds no money (UAT SB p.13)	PASS
TC-ADV-02	`TUat07AdvanceTests:53` — Funded advance becomes available only after the issuer confirms proceeds	PASS
TC-ADV-03	`TUat07AdvanceTests:87` — Sweep collects the rate of eligible daily sales; owed reduces; idempotent per day	PASS
TC-ADV-04	`TUat07AdvanceTests:156` — Refunds adjust the repayment base — net-of-refund, no over-collection	PASS
TC-ADV-05	`TUat07AdvanceTests:131` — Zero-sales day: no collection, balance and owed unchanged	PASS
TC-ADV-06	`TUat07AdvanceTests:175` — Advance proceeds are never counted as sales (BC p.10)	PASS

6.8 Reconciliation, fees & statements

100.0% compliance
100% coverage

Business case: BC p.18 'Reconciliation', 'Fees and billing' · **Storyboard:** SB p.14 Scene 7 · **UAT window:** Days 26–30 · **money/security-critical**

Where it is implemented

Capability	Backend source	API	UI screen
Three-ledger recon run, breaks, release gate	`…/sme/service/ReconciliationService.java:42, 139, 154`	`POST /api/ops/recon/run · /recon/breaks/{id}/resolve`	localhost:4200/ops/recon
Fees applied once / reversal	`…/sme/service/FeeService.java:38, 61`	`GET /api/ops/reports/fees`	localhost:4200/ops/reports
Statements	`…/sme/service/StatementService.java`	`GET/POST /api/merchant/statements · /download`	localhost:4200/merchant/statements

Test cases — 4 required · 4 covered · 4 pass · 0 fail · 0 partial · 0 not covered

TC-ID	Automated test (class · line) and what it asserts	Result
TC-RCN-01	`TUat08ReconFeesStatementsTests:39` — End-of-day run: three ledgers match after mixed operations	PASS

TC-ID	Automated test (class · line) and what it asserts	Result
TC-RCN-02	`TUat08ReconFeesStatementsTests:85` — Unexplained difference: break flagged, release blocked until resolved (BC p.18)	PASS
TC-RCN-03	`TUat08ReconFeesStatementsTests:138` — Fees applied exactly once per event; replay changes nothing	PASS
TC-RCN-04	`TUat08ReconFeesStatementsTests:185` — Statement download matches the ledger; withdrawal carries a bank reference	PASS

6.9 Security & recovery

100.0% compliance
100% coverage

Business case: BC p.18 'Security and recovery'; p.28 · **Storyboard:** SB p.15 Scene 8 · **UAT window:** Days 26–30 · **money/security-critical**

Where it is implemented

Capability	Backend source	API	UI screen
JWT auth, role gates, tenant scoping	`…/sme/security/SecurityConfig.java · security/JwtAuthFilter.java`	`all /api/**`	core/guards.ts (role guards)
Audit of privileged actions	`…/sme/service/AuditService.java`	`GET /api/ops/audit`	localhost:4200/ops/audit
Backups / restore tests (RTO/RPO)	`…/sme/service/AdminService.java:286, 299`	`POST /api/admin/backups · /restore-test`	localhost:4200/admin/hygiene
Credential rotation / API-client revoke	`…/sme/service/AdminService.java:219-247, 349`	`POST /api/admin/connectors/{id}/rotate · /api-clients/{id}/revoke`	localhost:4200/admin/connectors

Test cases — 6 required · 6 covered · 6 pass · 0 fail · 0 partial · 0 not covered

TC-ID	Automated test (class · line) and what it asserts	Result
TC-SEC-01	`TUat09SecurityRecoveryTests:26` — Tenant scoping is bound to the token: merchant A cannot touch merchant B's money	PASS
TC-SEC-02	`TUat09SecurityRecoveryTests:100` — Privileged actions audited with actor and before/after	PASS
TC-SEC-03	`TUat09SecurityRecoveryTests:116` — Restore test evidence: RTO < 2h and RPO = 0	PASS
TC-SEC-04	`TUat01SetupConfigurationTests:87` — Credential rotation revokes old secret and is audited `TUat03AcceptanceTests:190` — QR payload cannot be replayed for a different merchant `TUat09SecurityRecoveryTests:128` — Credential-compromise lifecycle: rotate + revoke + session records	PASS
TC-SEC-05	`TUat14SetupOpsCompletionTests:224` — API clients: create with scopes, REVOKE cuts access; audit records both	PASS
TC-SEC-06	`TUat09SecurityRecoveryTests:144` — Withdrawal-gate cannot be bypassed even with clean balance if breaks exist	PASS

6.10 Operations, merchant tools & compliance consoles

90.0% compliance
100% coverage

Business case: BC p.6 merchant tools; p.13 governance; p.28 risks · **Storyboard:** SB p.9; Addendum 1 · **UAT window:** Days 6–30

Where it is implemented

Capability	Backend source	API	UI screen
Inventory / khata / tabs	`…/sme/service/InventoryService.java · web/MerchantController.java:312-523`	`/api/merchant/inventory · /khata · /tabs`	localhost:4200/merchant/inventory · /khata · /tabs
Ops desk: complaints, disputes, suspensions, incidents	`…/sme/service/OpsService.java`	`/api/ops/complaints · /disputes · /suspend · /incidents`	localhost:4200/ops/desk · localhost:4200/ops/incidents
AML / SAR / DSAR	`…/sme/service/ComplianceService.java:64-187`	`/api/admin/compliance/*`	localhost:4200/admin/compliance
Settlement & fee reports, deployments, backups	`…/sme/service/ReportingService.java · AdminService.java:249-330`	`/api/ops/reports/* · /api/admin/deployments`	localhost:4200/ops/reports · localhost:4200/admin/hygiene

Test cases — 30 required · 30 covered · 27 pass · 1 fail · 2 partial · 0 not covered

TC-ID	Automated test (class · line) and what it asserts	Result
TC-OPS-01	`TUat11MerchantToolsTests:42` — Inventory updates itself: sale decrements, invoice delivery increments	PASS
TC-OPS-02	`TUat11MerchantToolsTests:83` — Low-stock alert raised once, resolved on recovery (upsert semantics)	PASS
TC-OPS-03	`TUat11MerchantToolsTests:99` — One-tap reorder creates a submitted order at the preferred supplier (and refuses mismatches)	PASS
TC-OPS-04	`TUat11MerchantToolsTests:132` — Khata: create, entries view, SIMULATED reminder (settling blocked — finding #3) `TUat11MerchantToolsTests:159` — tcOps04_khataChargeSettle_blockedByFinding3 [SKIP:]	PARTIAL
TC-OPS-05	`TUat11MerchantToolsTests:164` — Two-tap tab lifecycle: create, add entry, settle, remind	PASS
TC-OPS-06	`TUat14SetupOpsCompletionTests:115` — Supplier console: order queue with detail; merchant invoices issue from it [FAIL: java.lang.AssertionError: Status expected:<200> but was:<404>]	FAIL
TC-OPS-07	`TUat14SetupOpsCompletionTests:146` — Supplier visibility of the order->invoice->payment chain (status trace)	PASS
TC-OPS-08	`TUat14SetupOpsCompletionTests:164` — Supplier bank accounts: pending queue visible to ops; approve -> receiving credit	PASS
TC-OPS-09	`TUat11MerchantToolsTests:191` — Accept-payment info: QR payload, short code and card terminal surfaced (M06)	PASS
TC-OPS-10	`TUat14SetupOpsCompletionTests:194` — The underlying feed data exists (latest confirmed rows per owner) `TUat14SetupOpsCompletionTests:183` — tcOps10_opsPaymentFeed_blockedByFinding4 [SKIP:]	PARTIAL
TC-OPS-11	`TUat10ComplianceDataProtectionTests:123` — Complaint lifecycle: log -> assign -> resolve (T10)	PASS
TC-OPS-12	`TUat10ComplianceDataProtectionTests:144` — Card dispute workflow: create on a confirmed payment and resolve (T11)	PASS
TC-OPS-13	`TUat08ReconFeesStatementsTests:216` — Daily settlement equals confirmed receipts minus confirmed supplier payments	PASS
TC-OPS-14	`TUat08ReconFeesStatementsTests:247` — Fee reports: billed equals collected per code for the day	PASS
TC-OPS-15	`TUat14SetupOpsCompletionTests:203` — Ops statements: generate for any owner (merchant, supplier, lender)	PASS
TC-OPS-16	`TUat10ComplianceDataProtectionTests:97` — Suspension cycle: suspended merchant can't transact or log in; lift restores	PASS
TC-OPS-17	`TUat14SetupOpsCompletionTests:42` — Environment descriptor: sandbox, simulated banner for the UAT panel	PASS
TC-OPS-18	`TUat14SetupOpsCompletionTests:224` — API clients: create with scopes, REVOKE cuts access; audit records both	PASS
TC-OPS-19	`TUat14SetupOpsCompletionTests:242` — Deployments: record a deployment (SUCCESS) visible in history	PASS
TC-OPS-20	`TUat14SetupOpsCompletionTests:252` — Deployments: rollback marks the target ROLLED_BACK	PASS
TC-OPS-21	`TUat14SetupOpsCompletionTests:264` — Backups: backup-now creates a SUCCESS snapshot, listed in history	PASS
TC-OPS-22	`TUat14SetupOpsCompletionTests:274` — Restore tests: run against the fresh backup; result recorded with RTO/RPO	PASS
TC-OPS-23	`TUat14SetupOpsCompletionTests:285` — Compliance queues over HTTP with role gates: AML alerts, SAR, DSAR list	PASS
TC-OPS-24	`TUat09SecurityRecoveryTests:116` — Restore test evidence: RTO < 2h and RPO = 0	PASS
TC-OPS-25	`TUat14SetupOpsCompletionTests:298` — Audit console: filter and pagination over the labelled trail	PASS
TC-OPS-26	`TUat02OnboardingTests:146` — Sanctions screening failure blocks onboarding (K01, BC p.28)	PASS
TC-OPS-27	`TUat10ComplianceDataProtectionTests:25` — Velocity monitoring: >10 payments/24h raises a VELOCITY AML alert (K02)	PASS
TC-OPS-28	`TUat10ComplianceDataProtectionTests:39` — SAR lifecycle: draft from an alert, then submit (K03, BC p.28)	PASS
TC-OPS-29	`TUat10ComplianceDataProtectionTests:54` — DSAR export completes and contains aggregates but NOT customer-level Khata (K04)	PASS

TC-ID	Automated test (class · line) and what it asserts	Result
TC-OPS-30	`TUat10ComplianceDataProtectionTests:81` — Consent withdrawal is recorded with a reason and blocks re-sharing (K05/K06)	PASS

6.11 Performance & service targets

66.7% compliance
100% coverage

Business case: BC p.18 UAT exit: 20 TPS × 30 min; 99.9%; 15-min ack · **Storyboard:** SB p.17 · **UAT window:** Days 26–30

Where it is implemented

Capability	Backend source	API	UI screen

TC-RACE-11	`TUat15RaceConditionTests:409` — Concurrent reconciliation runs: every run that succeeds must persist the detected break (TC-RCN-01, R11) [FAIL: org.opentest4j.AssertionFailedError: [a detected gap must persist as a break despite concurrent runs]]	FAIL
TC-RACE-12	`TUat15RaceConditionTests:442` — Hold + concurrent withdrawals: held funds are never spendable (TC-BAL-04, R12)	PASS
TC-RACE-13	`TUat15RaceConditionTests:478` — Concurrent double approval: supplier provisioned exactly once (TC-ONB-02, R13)	PASS

7. Open findings and residual gaps

7.1 Failing and skipped tests (main evidence run)

Test	TC-IDs	Status	Observed
`TUat04BalanceTests:67` tcBal01_qrPendingDisplaySpecConformant	TC-BAL-01	SKIP	
`TUat11MerchantToolsTests:159` tcOps04_khataChargeSettle_blockedByFinding3	TC-OPS-04	SKIP	
`TUat14SetupOpsCompletionTests:183` tcOps10_opsPaymentFeed_blockedByFinding4	TC-OPS-10	SKIP	
`TUat14SetupOpsCompletionTests:115` TC-OPS-06 · Supplier console: order queue with detail; merchant invoices issue from it	TC-OPS-06	FAIL	java.lang.AssertionError: Status expected:<200> but was:<404>
`TUat15RaceConditionTests:86` TC-RACE-02 · Many invoices race the same funds: sum paid available, no overdraw (R2)	TC-RACE-02	FAIL	org.opentest4j.AssertionFailedError: [only one invoice can spend the 5,000]
`TUat15RaceConditionTests:409` TC-RACE-11 · Concurrent reconciliation runs: every run that succeeds must persist the detected break (TC-RCN-0	TC-RACE-11	FAIL	org.opentest4j.AssertionFailedError: [a detected gap must persist as a break despite concurrent runs]
`TUat15RaceConditionTests:333` TC-RACE-09 · Accept-vs-fund race: money moves only for a FUNDED advance, exactly once (TC-ADV-02, R9)	TC-RACE-09	FAIL	java.lang.AssertionError:

7.2 Run-to-run variance of the concurrency tests

The race-condition class was re-run 3 more times on the same source snapshot. A test case that passes in one run and fails in another has a timing-dependent defect: it can fail in production under real load. Such a case is not counted as compliant, even if it passed in the main evidence run.

TC-ID	Main run	Re-run 1	Re-run 2	Re-run 3	Verdict
TC-RACE-01	PASS	PASS	PASS	PASS	STABLE PASS
TC-RACE-02	FAIL	FAIL	FAIL	FAIL	STABLE FAIL

TC-RACE-11	FAIL	PASS	PASS	PASS	FLAKY
TC-RACE-12	PASS	PASS	PASS	PASS	STABLE PASS
TC-RACE-13	PASS	PASS	PASS	PASS	STABLE PASS

7.3 Specification deviations noted during code review

Item	Business case	Implementation	Impact
Card service fee	BC p.16: 2.50% billed vs 2.20% external acquirer cost (0.30% contribution)	`DataSeeder.java:191` seeds 1.50% billed vs 2.20%; TC-SET-10 asserts 1.50%	Seeded tariff gives a negative card contribution. Confirm the agreed tariff and align the seed and TC-SET-10.

Item	Business case	Implementation	Impact
QR pending display (finding #2)	BC p.7–8: amounts show as pending until the issuer confirms	QR/short-code accepts create no pending subledger row; spec test disabled	Money rule holds (not spendable); the display gap affects TC-BAL-01
Khata entries API (finding #3)	BC p.6: Khata entries distinguish credit from payment	`Dtos.java:391` puts @NotBlank on an enum -> HTTP 500	Khata charge/settle cannot run via API (TC-OPS-04)
Ops payment feed (finding #4)	BC p.13: TPTS oversight and reconciliation	`OpsController.java:229` loads merchant name lazily -> 500	Ops payment feed screen fails (TC-OPS-10)
Day windows use the default time zone (finding #1)	Daily sweeps and statements	Mixes LocalDate.now() with UTC offsets	Passes under UTC; a deployment risk on a non-UTC JVM
Ops cannot approve a supplier bank-account change (seen while recording)	BC p.9/p.18: account changes need independent approval	Request status is PENDING_APPROVAL, but /ops/approvals shows Approve/Reject only for status PENDING	The page says 'already PENDING_APPROVAL' with no Approve button, so the independent-approval step cannot be completed in the UI.
'Run advance flow' fails (seen while recording)	BC p.17 demo step 5; BC p.18 'Advance funding'	The Admin Simulator button calls scene 'advance_flow'; the backend answers 'Unknown scene advance_flow'	Together with the missing Fund button, advance funding cannot be shown in the UI.
No 'Fund' action in the UI	BC p.11/p.18 'Advance funding'	The lender and merchant screens have no control for POST /api/lender/advances/{id}/fund	Funding can be shown only through Admin Simulator 'Run advance flow'.
No restore-test action in the UI	BC p.18 'Security and recovery'	/admin/hygiene offers 'Backup now' but no button for POST /api/admin/backups/{id}/restore-test	RTO/RPO evidence is available from the automated test (TC-SEC-03) only.

7.4 Outside the software UAT (BC p.17–18 production readiness)

BC p.17 states that the 25–30-day UAT does not promise bank certification, a new licence or a live credit facility. These conditions cannot be shown by test-case coverage. They are tracked here as external dependencies, not as compliance gaps.

Production condition (BC p.18 / p.27)	Owner	Platform status
Executed issuer, sponsor, lender and technology agreements	TPTS / partners	External — not evidenced in code
Real bank/issuer API, book-transfer/EFT and IPS certification	Bank / Mindlabs	Simulated connectors only (BankSimulator; every event labelled SIMULATED — TC-SET-28)
Actual P2M switching tariff, sponsor markup, onboarding fee	Finance leads	Provisions configured and labelled as unquoted (TC-SET-11/12)
Funded lending facility and lender-approved credit policy	Lender	Simulated lender adapter (TC-SET-06)
Native IPP B2B	Operator	Excluded at go-live, as BC requires (TC-SET-02)

Appendix A — Full automated test results

Run: 2026-11-09T02:03:28+05:30. Command: `cd backend && ./gradlew test`. Source: `backend/build/test-results/test/TEST-*.xml`. Total 137: 130 passed, 4 failed, 3 skipped.

Test class · line	Test (display name)	Time s	Result
TUat01SetupConfigurationTests:33	TC-SET-01 · Bank/issuer connector configured + health-checked in sandbox	0.03	PASS
TUat01SetupConfigurationTests:54	TC-SET-02 · Capability matrix: native IPP B2B excluded at go-live (BC p.9/p.17)	0.01	PASS
TUat01SetupConfigurationTests:69	TC-SET-03 · Balance account mapped to issuer account ref; legal holder recorded (E04/E05)	0.07	PASS
TUat01SetupConfigurationTests:87	TC-SET-04/TC-SEC-04 · Credential rotation revokes old secret and is audited	0.06	PASS
TUat01SetupConfigurationTests:111	TC-SET-05 · Connector-down state is recorded (money stays pending — see TC-ACC-05)	0.02	PASS
TUat01SetupConfigurationTests:128	TC-SET-06 · Lender adapter contract endpoints configured (E10/E11)	0.01	PASS
TUat01SetupConfigurationTests:142	TC-SET-08 · IPS, card, QR and notification connectors all initialisable	0.04	PASS
TUat01SetupConfigurationTests:157	TC-SET-07 · Consent data fields: customer-level Khata excluded by default (BC p.12)	0.15	PASS
TUat01SetupConfigurationTests:178	TC-SET-10 · Card tariff billed 1.50% vs external 2.20%, basis CONTRACTED (BC p.15/16)	0.01	PASS
TUat01SetupConfigurationTests:194	TC-SET-11 · Switching N$0.40 labelled 'budgeting provision, not contracted' (BC p.15)	0.83	PASS
TUat01SetupConfigurationTests:207	TC-SET-12 · Sponsor N$0.10 labelled 'unquoted provision' (BC p.15)	0.04	PASS
TUat01SetupConfigurationTests:220	TC-SET-13 · IPS P2M customer fee statutory N$0; interchange shown as cost (BC p.16)	0.04	PASS
TUat01SetupConfigurationTests:229	TC-SET-14/15 · Fee codes tariffed; reversal status available (fee pack prerequisite)	0.03	PASS
TUat01SetupConfigurationTests:238	TC-SET-22 · Limit profile persisted; daily withdrawal cap enforced (BC p.7)	0.08	PASS
TUat01SetupConfigurationTests:259	TC-SET-16 · Only TPTS_OPS can act on the merchant approval queue (role gate)	0.36	PASS
TUat01SetupConfigurationTests:277	TC-SET-17 · Bank-account queue readable by TPTS_OPS; supplier role gets 403	0.74	PASS
TUat01SetupConfigurationTests:291	TC-SET-27 · Eligibility exclusion rules configured and toggleable (C23)	0.02	PASS
TUat02OnboardingTests:28	TC-ONB-01 · Merchant KYC -> TPTS approval provisions balance account, QR, short code	0.05	PASS
TUat02OnboardingTests:64	TC-ONB-02 · Supplier onboarding: owners, receiving account approval, catalogue provisioning	0.04	PASS
TUat02OnboardingTests:92	TC-ONB-03 · Supplier bank-account change requires an approver different from the requester	0.06	PASS
TUat02OnboardingTests:126	TC-ONB-04 · Unapproved merchant refused: payments, orders and credit all blocked	0.03	PASS
TUat02OnboardingTests:146	TC-OPS-26 · Sanctions screening failure blocks onboarding (K01, BC p.28)	0.02	PASS
TUat03AcceptanceTests:40	TC-ACC-01 · QR payment confirmed exactly once; funds available; single speaker confirmation	0.06	PASS
TUat03AcceptanceTests:66	TC-ACC-02 · Basic-phone short-code payment: lookup + pay via real API	0.09	PASS
TUat03AcceptanceTests:92	TC-ACC-03 · Card sale is PENDING and not spendable until acquirer releases; fee applied once	0.09	PASS

Test class · line	Test (display name)	Time s	Result
TUat03AcceptanceTests:115	TC-ACC-03b · Card charge failure reverses the pending rows; no funds moved	0.05	PASS
TUat03AcceptanceTests:130	TC-ACC-04 · Duplicate bank callback: no second debit/credit/stock adjustment (BC p.18)	0.10	PASS
TUat03AcceptanceTests:158	TC-ACC-05 · Bank timeout keeps payment PENDING; later final answer still completes	0.05	PASS
TUat03AcceptanceTests:178	TC-ACC-06 · Holds reduce available balance and release on failure (TC-BAL-03 companion)	0.04	PASS
TUat03AcceptanceTests:190	TC-SEC-04a · QR payload cannot be replayed for a different merchant	0.06	PASS
TUat04BalanceTests:38	TC-BAL-01 · Available increases only after the issuer confirms (BC p.8)	0.07	PASS
TUat04BalanceTests:67	tcBal01_qrPendingDisplaySpecConformant	0.00	SKIP
TUat04BalanceTests:80	TC-BAL-02 · Pending is never spendable until confirmed	0.04	PASS
TUat04BalanceTests:92	TC-BAL-03 · Hold reduces available; release restores it (UAT SB p.15)	0.05	PASS
TUat04BalanceTests:108	TC-BAL-04 · Owed displayed separately from sales proceeds, never mixed	0.08	PASS
TUat04BalanceTests:127	TC-BAL-05 · Issuer ledger (authoritative) and subledger (mirror) agree per owner	0.07	PASS
TUat05B2bPaymentTests:51	TC-B2B-01 · Supplier invoice carries unique reference from a verified supplier	0.06	PASS
TUat05B2bPaymentTests:65	TC-B2B-02 · Pay from balance is atomic: one debit, one supplier credit, invoice PAID	0.08	PASS
TUat05B2bPaymentTests:105	TC-B2B-03 · Replayed bank confirmation absorbed by idempotency — no double debit/credit	0.10	PASS
TUat05B2bPaymentTests:125	TC-B2B-04 · Bank timeout: hold preserved, invoice unpaid; retry with final answer completes	0.11	PASS
TUat05B2bPaymentTests:150	TC-B2B-05 · Insufficient balance refused — shortfall reported, no overdraft (UAT SB p.11)	0.08	PASS
TUat05B2bPaymentTests:167	TC-B2B-06 · Insufficient -> advance funded -> issuer confirms -> payment allowed (Option B)	0.30	PASS
TUat05B2bPaymentTests:196	TC-B2B-07 · Bank failure: hold released, invoice stays unpaid, retry possible	0.09	PASS
TUat05B2bPaymentTests:215	TC-B2B-08 · Concurrent orders: only one can spend the available amount	0.12	PASS
TUat05B2bPaymentTests:267	TC-B2B-09 · Refund linked to original sale: adjusts records, no double credit	0.13	PASS
TUat05B2bPaymentTests:295	TC-B2B-10 · Hold lifecycle is visible on the merchant; expiry guard exists	0.07	PASS
TUat06RecordsConsentTests:28	TC-REC-01 · Verified records: receipts net of refunds, trading days, monthly seasonality	0.56	PASS
TUat06RecordsConsentTests:62	TC-REC-02 · Consent captured with named lender, purpose, fields and retention (BC p.12)	0.34	PASS
TUat06RecordsConsentTests:84	TC-REC-03 · Withdrawal stops future disclosure and blocks new assessments (BC p.12)	0.32	PASS
TUat06RecordsConsentTests:114	TC-REC-04 · Khata never part of the feed; merchant records view has no customer-level data	0.03	PASS
TUat06RecordsConsentTests:127	TC-REC-05 · Self-transfers and circular B2B excluded from verified sales (AML alert raised)	0.08	PASS
TUat06RecordsConsentTests:149	TC-SET-27 · Toggling exclusion rules changes eligibility computation (C23)	0.08	PASS
TUat06RecordsConsentTests:171	TC-SET-30 · Synthetic 90–120 day history generator produces eligibility-usable data	1.27	PASS

Test class · line	Test (display name)	Time s	Result
TUat06RecordsConsentTests:190	TC-REC-06 · Assessment requires merchant to be approved first	0.02	PASS
TUat07AdvanceTests:32	TC-ADV-01 · Lender approval alone adds no money (UAT SB p.13)	0.24	PASS
TUat07AdvanceTests:53	TC-ADV-02 · Funded advance becomes available only after the issuer confirms proceeds	0.06	PASS
TUat07AdvanceTests:87	TC-ADV-03 · Sweep collects the rate of eligible daily sales; owed reduces; idempotent per day	0.16	PASS
TUat07AdvanceTests:131	TC-ADV-05 · Zero-sales day: no collection, balance and owed unchanged	0.09	PASS
TUat07AdvanceTests:156	TC-ADV-04 · Refunds adjust the repayment base — net-of-refund, no over-collection	0.11	PASS
TUat07AdvanceTests:175	TC-ADV-06 · Advance proceeds are never counted as sales (BC p.10)	0.06	PASS
TUat07AdvanceTests:192	TC-SET-24 · Offer capped by lesser-of rule: min(N$25,000, 20% avg monthly, lender limit)	0.38	PASS
TUat07AdvanceTests:221	TC-SET-24b · Assessment declines without sufficient history or revenue	0.26	PASS
TUat07AdvanceTests:245	TC-SET-25 · New draws pause when 30-day arrears exceed the trigger (BC p.19)	0.16	PASS
TUat08ReconFeesStatementsTests:39	TC-RCN-01 · End-of-day run: three ledgers match after mixed operations	0.49	PASS
TUat08ReconFeesStatementsTests:85	TC-RCN-02 · Unexplained difference: break flagged, release blocked until resolved (BC p.18)	0.18	PASS
TUat08ReconFeesStatementsTests:116	TC-SET-23 · Stale holds are expired by the recon run and flagged (C22)	0.12	PASS
TUat08ReconFeesStatementsTests:138	TC-RCN-03 · Fees applied exactly once per event; replay changes nothing	0.09	PASS
TUat08ReconFeesStatementsTests:165	TC-SET-15 · Fee reversal on full refund; re-reversal is a no-op	0.09	PASS
TUat08ReconFeesStatementsTests:185	TC-RCN-04 · Statement download matches the ledger; withdrawal carries a bank reference	0.19	PASS
TUat08ReconFeesStatementsTests:216	TC-OPS-13 · Daily settlement equals confirmed receipts minus confirmed supplier payments	0.13	PASS
TUat08ReconFeesStatementsTests:247	TC-OPS-14 · Fee reports: billed equals collected per code for the day	0.12	PASS
TUat09SecurityRecoveryTests:26	TC-SEC-01 · Tenant scoping is bound to the token: merchant A cannot touch merchant B's money	0.28	PASS
TUat09SecurityRecoveryTests:70	TC-SET-18/19 · Role matrix hard gates: opsadminlendersuppliermerchant	0.80	PASS

TUat10ComplianceDataProtectionTests:144	TC-OPS-12 · Card dispute workflow: create on a confirmed payment and resolve (T11)	0.07	PASS
TUat11MerchantToolsTests:42	TC-OPS-01 · Inventory updates itself: sale decrements, invoice delivery increments	0.12	PASS
TUat11MerchantToolsTests:83	TC-OPS-02 · Low-stock alert raised once, resolved on recovery (upsert semantics)	0.05	PASS
TUat11MerchantToolsTests:99	TC-OPS-03 · One-tap reorder creates a submitted order at the preferred supplier (and refuses mismatches)	0.09	PASS
TUat11MerchantToolsTests:132	TC-OPS-04 · Khata: create, entries view, SIMULATED reminder (settling blocked — finding #3)	0.11	PASS
TUat11MerchantToolsTests:159	tcOps04_khataChargeSettle_blockedByFinding3	0.00	SKIP
TUat11MerchantToolsTests:164	TC-OPS-05 · Two-tap tab lifecycle: create, add entry, settle, remind	0.18	PASS
TUat11MerchantToolsTests:191	TC-OPS-09 · Accept-payment info: QR payload, short code and card terminal surfaced (M06)	0.13	PASS
TUat11MerchantToolsTests:206	M26 · Merchant statements: generate + download (UAT SB p.14)	0.12	PASS
TUat12SceneRunnerTests:35	TC-SET-28b · Scenario catalogue lists all eight labelled scenes (E33)	0.05	PASS
TUat12SceneRunnerTests:49	Scene 1 · Onboard + first QR payment confirmed once	0.11	PASS
TUat12SceneRunnerTests:58	Scene 2 · Duplicate callback ignored (single-effect guarantee)	0.10	PASS
TUat12SceneRunnerTests:66	Scene 3 · Pay supplier invoice atomically	0.10	PASS
TUat12SceneRunnerTests:79	Scene 4 · Card + timeout: pending preserved	0.05	PASS
TUat12SceneRunnerTests:87	Scene 5 · Oversized supplier payment is refused deterministically	0.19	PASS
TUat12SceneRunnerTests:99	Scene 6 · Consent -> assessment -> offer -> fund -> sweep completes on the seed merchant	0.14	PASS
TUat12SceneRunnerTests:115	Scene 7 · Recon break injected -> run flags it -> withdrawal release is blocked	0.09	PASS
TUat12SceneRunnerTests:129	Scene 8 · Refund + suspension cycle reproduce	0.10	PASS
TUat12SceneRunnerTests:138	TC-SET-28 · All simulation-layer audit entries are labelled simulated=true (E34)	0.06	PASS
TUat12SceneRunnerTests:150	E30 · Simulation layer is disabled when app.environment = production	0.05	PASS
TUat13PerformanceTests:49	TC-PERF-01 · 20 TPS sustained: zero failed commits, no ledger drift	30.09	PASS
TUat13PerformanceTests:117	TC-PERF-02 · Platform health reports 99.9% availability and live latency/TPS	0.02	PASS
TUat13PerformanceTests:128	TC-PERF-03 · Incident SLA plumbing available for service targets (15-min ack)	0.02	PASS
TUat14SetupOpsCompletionTests:42	TC-SET-09 & TC-OPS-17 · Environment descriptor: sandbox, simulated banner for the UAT panel	0.02	PASS
TUat14SetupOpsCompletionTests:52	TC-SET-19 · Settings console: list + upsert admin-only; values survive a re-read	0.37	PASS
TUat14SetupOpsCompletionTests:72	TC-SET-20/26 · Synthetic history seeding: requested window, SIMULATED-labelled, drives eligibility	0.36	PASS

Test class · line	Test (display name)	Time s	Result
TUat14SetupOpsCompletionTests:92	TC-SET-31 · Sandbox seeder is idempotent: a second full run changes nothing	0.01	PASS
TUat14SetupOpsCompletionTests:115	TC-OPS-06 · Supplier console: order queue with detail; merchant invoices issue from it	0.21	FAIL
TUat14SetupOpsCompletionTests:146	TC-OPS-07 · Supplier visibility of the order->invoice->payment chain (status trace)	0.05	PASS
TUat14SetupOpsCompletionTests:164	TC-OPS-08 · Supplier bank accounts: pending queue visible to ops; approve -> receiving credit	0.02	PASS
TUat14SetupOpsCompletionTests:183	tcOps10_opsPaymentFeed_blockedByFinding4	0.00	SKIP
TUat14SetupOpsCompletionTests:194	TC-OPS-10a · The underlying feed data exists (latest confirmed rows per owner)	0.10	PASS
TUat14SetupOpsCompletionTests:203	TC-OPS-15 · Ops statements: generate for any owner (merchant, supplier, lender)	0.04	PASS
TUat14SetupOpsCompletionTests:224	TC-OPS-18 & TC-SEC-05 · API clients: create with scopes, REVOKE cuts access; audit records both	0.16	PASS
TUat14SetupOpsCompletionTests:242	TC-OPS-19 · Deployments: record a deployment (SUCCESS) visible in history	0.01	PASS
TUat14SetupOpsCompletionTests:252	TC-OPS-20 · Deployments: rollback marks the target ROLLED_BACK	0.03	PASS
TUat14SetupOpsCompletionTests:264	TC-OPS-21 · Backups: backup-now creates a SUCCESS snapshot, listed in history	0.01	PASS
TUat14SetupOpsCompletionTests:274	TC-OPS-22 · Restore tests: run against the fresh backup; result recorded with RTO/RPO	0.01	PASS
TUat14SetupOpsCompletionTests:285	TC-OPS-23 · Compliance queues over HTTP with role gates: AML alerts, SAR, DSAR list	0.42	PASS
TUat14SetupOpsCompletionTests:298	TC-OPS-25 · Audit console: filter and pagination over the labelled trail	0.21	PASS
TUat15RaceConditionTests:48	TC-RACE-01 · Concurrent duplicate callbacks: exactly one credit (R1)	0.14	PASS
TUat15RaceConditionTests:86	TC-RACE-02 · Many invoices race the same funds: sum paid available, no overdraw (R2)	0.13	FAIL
TUat15RaceConditionTests:127	TC-RACE-03 · Concurrent funding replays: advance credited exactly once (R3)	0.15	PASS
TUat15RaceConditionTests:162	TC-RACE-04 · Concurrent withdrawals cannot overdraw the available balance (R4)	0.25	PASS
TUat15RaceConditionTests:199	TC-RACE-05 · Concurrent sale + sweep: day's collection is computed once, no double sweep (R5)	0.14	PASS
TUat15RaceConditionTests:241	TC-RACE-06 · Ledger mirror stays intact after every race (issuer net == subledger net) (R6)	0.09	PASS
TUat15RaceConditionTests:261	TC-RACE-07 · Concurrent double invoice issuance: exactly ONE invoice per order (TC-B2B-01, R7)	0.07	PASS
TUat15RaceConditionTests:299	TC-RACE-08 · Concurrent offer acceptance: state transitions exactly once (TC-ADV-01, R8)	0.05	PASS
TUat15RaceConditionTests:333	TC-RACE-09 · Accept-vs-fund race: money moves only for a FUNDED advance, exactly once (TC-ADV-02, R9)	0.12	FAIL
TUat15RaceConditionTests:375	TC-RACE-10 · Concurrent refunds cannot over-refund the same payment (TC-B2B-09, R10)	0.06	PASS
TUat15RaceConditionTests:409	TC-RACE-11 · Concurrent reconciliation runs: every run that succeeds must persist the detected break (TC-RCN-01, R11)	0.14	FAIL
TUat15RaceConditionTests:442	TC-RACE-12 · Hold + concurrent withdrawals: held funds are never spendable (TC-BAL-04, R12)	0.11	PASS
TUat15RaceConditionTests:478	TC-RACE-13 · Concurrent double approval: supplier provisioned exactly once (TC-ONB-02, R13)	0.06	PASS
ZDiagReconTests:11	DIAG recon	60.08	PASS
